

Acceptable Use of Company Technology Policy

The use of company technology is an essential tool for employees to perform their job duties, but it also presents risks if not used responsibly. As such, it is crucial that all employees understand and adhere to this policy, which outlines the acceptable use of company technology.

Company devices, including laptops, desktops, tablets, and smartphones, are provided by the company for business purposes only. Personal use of these devices during work hours is strictly prohibited, as it can compromise productivity and create distractions. However, personal use of company devices is permitted during non-work hours, but employees must ensure that their personal activities do not interfere with their work responsibilities or compromise company data security. As described under the 'Password and Credential Management Standard' policy, all employees are required to follow strict password policies, including regular password changes and multi-factor authentication.

When using company technology for personal purposes, employees must also be aware of the potential risks associated with installing unapproved software on their devices. The installation of such software requires IT security sign-off, as it may pose a threat to company data or systems. Employees should not attempt to install any software without first obtaining approval from the IT department and following all necessary procedures outlined in the 'Data Classification and Handling Policy'. This policy ensures that sensitive company data is properly protected and handled.

Employees are also responsible for ensuring that their personal devices used with company technology comply with this policy. This includes using only approved operating systems, applications, and other software on company devices. Employees who fail to comply with this policy may face disciplinary action, up to and including termination of employment. By following this policy, employees can help ensure the security and integrity of company data and systems.

It is also important for employees to be mindful of their online activities when using company technology. This includes avoiding any activities that could be considered harassment, bullying, or discrimination, as outlined in the 'Social Media and Online Conduct Policy'. Employees should also be aware of their company's social media policies, which are outlined under the 'Social Media and Online Conduct Policy', to ensure that they do not post any confidential or sensitive information on personal social media accounts.
