

Business Continuity and Disaster Recovery Plan

The Business Continuity and Disaster Recovery Plan is designed to ensure that our organization can continue to operate effectively in the event of a disruption or disaster, minimizing the impact on our business operations and employees. This plan outlines the procedures for restoring critical systems and functions within a 4-hour recovery time objective, as required by our regulatory environment. As described under the Physical Facility Access Control Policy, all facilities must be secured and protected from unauthorized access in order to prevent damage or disruption during an emergency.

In the event of a disaster, our Business Continuity and Disaster Recovery Plan will be activated, and all employees will be notified of the situation through established communication channels. The plan outlines specific roles and responsibilities for each department and employee, as well as procedures for securing sensitive data and intellectual property, in accordance with the Intellectual Property Assignment Policy. This includes procedures for encrypting and backing up critical data, as well as protocols for accessing and restoring systems from secure offsite locations.

The continuity plan is tested annually through a full tabletop exercise, which simulates the response to a disaster scenario and evaluates the effectiveness of our procedures. This exercise also provides an opportunity for employees to practice their roles and responsibilities, ensuring that everyone is aware of their part in responding to an emergency. The results of the exercise are reviewed and used to update and refine the plan, as necessary.

In addition to testing, the Business Continuity and Disaster Recovery Plan will be reviewed and updated annually, or as needed, to ensure that it remains relevant and effective. This includes reviewing and updating procedures for securing sensitive data and intellectual property, as well as ensuring that all critical systems are restorable within the 4-hour recovery time objective.
