

Security Incident Response Plan

In the event of a security incident, it is essential that all employees know their role in responding to and containing the breach. Any suspected data breach must be reported to the Security team within one hour of discovery. This ensures that the incident can be promptly assessed and contained, minimizing potential damage. The Security team will immediately activate the Incident Response Plan, which outlines the procedures for responding to security incidents.

As part of this plan, the Incident Response Team (IRT) maintains an on-call rotation with a 15-minute response SLA. This means that at least one member of the IRT is always available to respond to security incidents within 15 minutes of receiving a report. The IRT will work closely with other departments, such as IT and Compliance, to ensure that all necessary steps are taken to contain and mitigate the incident. As described under the "Vendor Onboarding Checklist" policy, any vendors or third-party contractors who may have been involved in the breach must be notified immediately and their involvement terminated if necessary.

The IRT will also work closely with HR to determine whether an employee's actions contributed to the breach, as outlined under the "Paid Time Off Accrual Policy". This ensures that any disciplinary action taken is fair and reasonable. The IRT will conduct a thorough investigation into the incident, gathering all relevant information and evidence before determining the best course of action. Once the incident has been contained and mitigated, the IRT will provide an update to management and other stakeholders on the status of the incident.

The goal of this plan is to minimize the impact of security incidents on our organization and ensure that we can quickly recover from any breaches. By following this plan, we can reduce the risk of data loss or theft, protect our customers' sensitive information, and maintain the trust of our stakeholders.
