

Mobile Device Management and BYOD Policy

The use of personal devices for work purposes is an increasingly common practice within our organization, and as such, we have established guidelines to ensure that these devices are used in a secure and compliant manner. As stated under the 'Supplier Diversity and Ethical Sourcing Policy', when using personal devices for company business, employees must enroll their device in our Mobile Device Management (MDM) system. This enrollment process ensures that all data transmitted or stored on the device is encrypted and protected by our organization's security standards.

As part of this MDM system, employees are required to use a secure email account provided by our organization for work-related communications. Personal devices accessing company email must enroll in the MDM system prior to using it for work purposes. This ensures that all emails sent or received on these devices are properly encrypted and scanned for malware. Furthermore, as stated under the 'Data Retention Policy', all data stored on enrolled devices is subject to our organization's data retention policies, which dictate how long company data can be retained on personal devices.

In the event of a lost or stolen device that has been enrolled in the MDM system, we will remotely wipe the device within one hour of receiving notification. This ensures that sensitive company data is not compromised and that the device cannot be used to access our organization's systems without authorization. It is the employee's responsibility to ensure their personal devices are properly enrolled in the MDM system and to report any lost or stolen devices promptly to the IT department.

It is also important to note that employees are responsible for ensuring their personal devices comply with all applicable laws and regulations, including those related to data protection and security. As stated under the 'Data Retention Policy', our organization has established guidelines for data retention and disposal, which apply equally to personal devices used for work purposes. By following these guidelines, we can ensure that our organization's data is protected and that employees are held accountable for their actions when using personal devices for company business.
